### Product Description

## ASV Equipment RT-65-1C Compact Track Loader

Take advantage of the RT-65-1C's maximum power, comfort and serviceability while enjoying the benefits of ASV's patented Posi-Track compact track loader technology, best-in-class ground clearance and unbeatable performance in digging and ground engagement work. Add in premium-360-degree visibility, cab comfort like you've never seen and intuitive electronic controls, and you'll understand why the RT-65-1C gives you the tools to get more done.

The RT-65-1C compact track loader provides maximum power with a 67.1 horsepower Tier 4 Final Yanmar diesel engine, 2,000-pound rated operating capacity, and optional 26.7 gpm high flow. That power is optimized with updated hydraulics, engine, controls, wiring, pumps, hoses, frame and more.

This ASV track loader boasts numerous optional technology features to make it easier to use while maximizing performance. Auto 2-speed, work tool positioner, self-leveling, and other features make this one of the best compact track loaders for both new and experienced operators. The RT-65-1C's Posi-Track® undercarriage achieves speeds of up to 9.1 mph and a low 4.2 psi ground pressure.

The RT-65-1C is a MAX-Series™ model, providing all the premium comforts associated with that class. Operators can better see the attachment and their surroundings with premium 360-degree visibility. A vibrant 7-inch color display improves convenience with access to vital monitoring tools. This is complemented by a fully adjustable suspended seat and a smooth ride provided by ASV's Posi-Track rubber track undercarriage. ASV compact track loaders include a 2-year, 2,000-hour warranty that not only boasts the industry's only no-derailment guarantee, but also covers the tracks for the entire warranty period. The RT-65-1C is built to allow operators to spend more time working and less time maintaining their machine. This is possible through industry-leading access, including a swing-out radiator, top hood and side doors that provide access to all sides of the engine compartment. The Posi-Track loader also incorporates Yanmar's optional SmartAssist telematics system.
