### Product Description

## ASV Equipment RT-135 Compact Track Loader

When it comes to power, performance, comfort and serviceability the RT-135 has it all. This machine was built to be a leader in a variety of applications and it's been built to last.

A, turbocharged Cummins 3.8 liter diesel engine powers the RT-135. This 132-horsepower engine produces 360 foot-pounds of torque, which is transferred to the terrain through direct-drive hydraulic motors, allowing the machine to easily move through its path.

The RT-135 achieves superior performance over competitive machines. The unit features a rated operating capacity of 3,500 lbs. and a tipping load of 10,000 lbs. It features ASV's patented Posi-Track® rubber-track suspension—well known for its smooth ride—and includes both suspended wheels and axles, allowing it to achieve faster speeds over all types of terrain. The fully-flexible track and suspended wheels conform to the ground, ensuring maximum traction in the roughest conditions. The MAX-Series features, combined with the RT-135's 15 inches of ground clearance, allow the unit to work in more places, on more days and more comfortably than competitive machines.

The RT-135 features our premium MAX-Series cab, designed with a spacious interior—including additional legroom, shoulder room and foot room—and improved ergonomics from corner to corner in order to reduce fatigue during long days and long jobs. An upgraded HVAC system allows for ideal circulation and better defrosting capabilities.

The RT-135 gives operators easy access to the Cummins engine through a three-panel hood and tilting cooler arrangement. This machine offers a hydraulic quick attach and a design that simplifies routine inspections of filters, oil and normal service items. The rearward tilting cab provides easy accessibility when further service is required.
